1. РЕЗИМЕ | Executive Summary

Оваа студија ги собира на едно место сите резултати за Вкупен Δ^9 -THC што некогаш се тестирани за нашите серии — 99 резултати од регистарот на сертификати (77 серии, 20 сорти) — и врз нив предлага нови опсези по класи (номинала $\pm$ толеранција) за залихата од Траншите 1, 2 и 3. | This study brings every Total Δ^9 -THC result ever tested into one place — 99 certificate-register results (77 batches, 20 strains) — and proposes new grade ranges (nominal $\pm$ tolerance) for the Tranche 1/2/3 stock on top of them.

2. ПОДАТОЦИ И ВЕРИФИКАЦИЈА | Data & Verification

Корпусот е компајлиран од регистарот на еCoA сертификати и потоа проверен во живо на Letta-базата на знаење (ImB_QC_COAs): 4,134 passages scanned live (ImB_QC_COAs); 176 unique Total-THC lines; all 99 register values present. | Corpus compiled from the eCoA register and live-verified against the Letta knowledgebase: 4,134 passages scanned live (ImB_QC_COAs); 176 unique Total-THC lines; all 99 register values present.

Слој Layer	Резултати Results	Забелешка Note
Регистар на сертификати Certificate register	99	77 серии, 20 сорти; секоја вредност препишана дословно 77 batches, 20 strains; every value transcribed verbatim

CI е интервал на доверба за средната вредност (t-распределба), прикажан само за $n \geq 3$ — за $n=1$ нема дистрибуција, а за $n=2$ интервалот е математички валиден но бескорисно широк. Резултатите вклучуваат и повторени мерења на исти серии: статистиката ја опишува популацијата на ТЕСТИРАНИ РЕЗУЛТАТИ, не независни серии. | CI is the confidence interval of the mean (t-distribution), shown only for $n \geq 3$ — $n=1$ is no distribution and $n=2$ gives a mathematically valid but uselessly wide interval. Results include repeat measurements of the same batches: the statistics describe the population of TESTED RESULTS, not independent batches.

4. ДИСТРИБУЦИИ ПО СОРТИ | Per-Strain Distributions

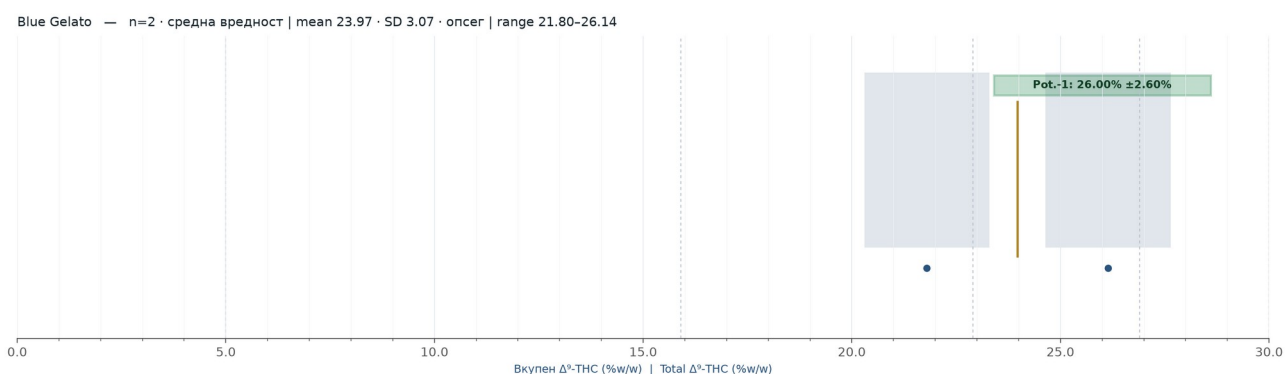

Оска 0,0–30,0 % Вкупен Δ^9 -THC; секој резултат носи зона од $\pm 1,5\%$ (сините појаси — натрупувањето е визуелна густина); крива на дистрибуција за $n \geq 3$; средна вредност (златна линија) и 95% CI (златна зона); предложени класи W-x (зелено); старите стандардни граници (испрекинато). | 0.0–30.0 % axis; each result carries a $\pm 1.5\%$ zone (blue bands — stacking is visual density); distribution curve for $n \geq 3$; mean (gold line) and 95% CI (gold zone); proposed W-x tiers (green); old standard boundaries (dashed).

5. ПРЕДЛОГ-КЛАСИ ЗА ЗАЛИХАТА T1/T2/T3 | Proposed Grades for the T1/T2/T3 Stock

Сидро = најнов верификуван резултат; каде нема ниту еден сертификат, основата е декларираната вредност (означено). Простор надолу = растојание од сидро до долната граница на класата. | Anchor = latest verified result; where no certificate exists the declared value is the basis (flagged). Downward headroom = distance from the anchor to the grade floor.
