

Purely Plant — ImB Dry Cannabis Flower

Product specifications, all strains. PP-QC-SPEC-001 v5.7 (proposed, consolidated) · 20 strains · Ph. Eur. 11.5 Cannabis flos 07/2024:3028 · Issued 11.08.2026 · Potency ladders from PP-QC-SPEC-001 v5.5 and v5.6.

Status: proposed, not released. Compiled from the potency history and the limits Purely Plant already applies; requires QC approval before it governs anything.

- Loss on drying is ≤ 12.0 % per the current Ph. Eur. 11.5 Cannabis flos 07/2024:3028. Certificates issued before that monograph took effect carry ≤ 10.00 %; the current monograph governs.
- Bile-tolerant gram-negative bacteria is specified at the Ph. Eur. 5.1.8 category C limit of $\leq 10^4$ CFU/g. The Purely Plant in-house CoA applies a tighter $< 10^2$ CFU/g and some IPH reports print $\leq 10^2$; the tighter practice is not specified here but is not prohibited by it.
- Mycotoxins are specified as all three parameters. Batches assayed before the Farmahem 197-series retests carry total aflatoxins only; on those the other two are recorded as not tested rather than left blank.
- Pesticides are specified as a conformity statement, not an analyte list. A value is stated only where there is an actual finding.

Apple and Banana (AB) PROVISIONAL

1 • Product identification

Product name	Apple and Banana — Dry Cannabis Flower
Strain / cultivar	Apple and Banana
Product code family	AB-THC{nominal}:CBD1
Dosage form	Dried cannabis flower for medicinal use (Cannabis flos)
Monograph	Ph. Eur. 11.5 Cannabis flos 07/2024:3028
Primary packaging	400.0 g ± 3 % triplex aluminium bag, heat-sealed
Storage	Below 25 °C, protected from light and moisture, in the original package
Retest period	12 months from date of manufacture
Manufacturer	Purely Plant DOOEL, s. Kojlija, Petrovec, North Macedonia

Ladder spacing. Five bands are needed to reach 8.02 %. A four-band ladder floored at 7.00 % would leave only 1.02 % under the result, short of the quarter-range buffer.

Ladder spacing. Spaced 6.00 / 6.00 / 5.00 / 5.25 rather than an even 5.00 ladder. An even ladder breaking at 10.00 % would split 9.20 % into one band and 10.96 / 11.20 % into the next, leaving margins of 0.96 % and 1.20 % — both under the buffer. This ladder holds all three results in Spec IV with 1.45 % clear.

Potency ladders carried unchanged from PP-QC-SPEC-001 v5.5 and v5.6; the quality panel is common to all strains and reflects the limits already applied, against Ph. Eur. 11.5 Cannabis flos 07/2024:3028. Strain names are settled: Cap Junky (Capulator × Seed Junky Genetics) and Permanent Marker, both consistent across the register and these documents. PP-QC-SPEC-001 v5.5 in Drive still carries the old “Cap Junkie” heading and needs the same edit.
