

Purely Plant — Tranche 1 Potency

Total Δ9-THC by strain and batch, with the certificate every result was transcribed from. Values are % w/w. Measurement uncertainty is excluded; stability timepoints are excluded.

21 of 21 Tranche 1 batches carry a Total Δ9-THC result, across 13 strains. 18 of them were assayed twice — the original release certificate and a later Farmahem 197-series retest. Both figures are shown; they are separate measurements of separate samples and are not reconciled here.

Blue Gelato (1 batch)

Batch	P-Number	Released % w/w	Result % w/w	Certificate	Issued

Released % w/w is the figure carried on the Tranches Overview control sheet. Where it differs from every certificate the difference is shown rather than resolved: the certificate is the measurement, the sheet is a control record.
