01 Analytical Method | Аналитички метод

Method Метода	Method validation status: Cp · VERIFIED VIS · SOP SOP · QCSOP-001 v.03
Identification Test A — Macroscopic Examination(Ph. Eur. mon. 3028 · Description) Visual and olfactory examination of dried inflorescence under standardised lighting (> 1 000 lux, D65). A representative 5.0 g sub-sample is spread on a white ceramic tray; morphology, colour, texture, resin coverage and odour profile are assessed against the monograph description and the in-house reference photograph library (Ref. PP-RL-CAN-v02). 10× hand loupe used for bract detail and trichome density overview. Identification Test B — Microscopic Examination(Ph. Eur. 2.8.23 · Identification of herbal drugs) Powdered drug preparation: 0.5 g ground through 355 µm sieve, mounted in chioral hydrate R (Ph. Eur. reagent) on glass slides (n = 3 preparations). Examined under compound light microscope (Olympus CX43 · Cal-Cert 2026-03) at 100×, 200× and 400× magnification. Diagnostic features identified: glandular trichomes (stalked + sessile), non-glandular trichomes, calcium oxalate cluster crystals, cystolithic cells. Compared to reference photomicrographs per Ph. Eur. 2.8.23 Figure 3028-1.	

02 Result(s) · Diagnostic Feature Assessment | Резултат(и)

№	Diagnostic Feature	Test	Observation	Status
1	ColourOverall visual impression under D65 illuminant	A	Green to brown-green; amber trichome heads visible at 10×	OK
2	MorphologyInflorescence architecture · bract dentition	A	Compact cymes with ovate, acuminate, deeply dentate bracts; pistillate flowers intact	OK
3	Texture & resinTactile assessment · trichome density	A	Sticky, resinous surface; dense trichome coverage confirmed at 10× loupe	OK
4	OdourOlfactory profile · monograph descriptor	A	Characteristic intense aromatic odour, fruity-sweet with terpene top-notes	OK
5	Glandular trichomes — stalkedMulticellular stalk, globular secretory head (8–16 cells)	B	Numerous; 200×: stalk 3–5 cells, globular head 80–100 µm Ø; amber resin	OK
6	Glandular trichomes — sessileShort or absent stalk, flattened disc-like head	B	Present on bract surfaces; 400×: disc head ~50 µm Ø	OK
7	Non-glandular covering trichomesUnicellular, warty cuticle — Ph. Eur. 2.8.23	B	Unicellular, pointed, thick-walled with verrucose (warty) cuticle ornamentation	OK
8	Calcium oxalate cluster crystalsRosette aggregates ca. 15–30 µm in mesophyll	B	Cluster crystals 18–28 µm observed in bract mesophyll (polarised light confirmed)	OK
9	CystolithsCaCO ₃ deposits in enlarged epidermal cells	B	Bear-claw cystoliths in upper-epidermis cells; dissolved in HCl R with effervescence	OK
Overall Identification — Tests A + B				CONFORMS

03 Method Validation · Measurement Uncertainty | Валидација на метод · Мерна неодреденост

Method Status Статус на метод
Compendial · Verified for cannabis flower matrix per Ph. Eur. 5.x (verification of compendial procedures) · Verification dossier QCV-001 v.02 · Specificity confirmed: all 9 diagnostic features reliably distinguished from <i>Humulus lupulus</i> (negative control) and other <i>Cannabis</i> chemotypes. 3-analyst inter-operator concordance 100 % (n = 18 slides, κ = 1.00).
Measurement Uncertainty Мерна неодреденост
Tests A and B are qualitative (present/absent/conforms) — no numerical measurement uncertainty applies. Reliability is governed by analyst training, inter-operator agreement (κ = 1.00), and reference-material concordance. False-negative risk mitigated by n = 3 independent slide preparations and cross-check against photomicrograph library.

Conforms

Result: The tested sample **conforms** to the product specification **QCSP-IMB-001 v.02 §1–2 (Appearance · Identification A + B)** per Ph. Eur. 11.5 Monograph 3028 + general chapter 2.8.23 — all 9 diagnostic features (4 macroscopic, 5 microscopic) positively identified and consistent with *Cannabis flos*. QC disposition only; final batch release is certified separately by the QP in linked CoQ CoQ-PP-2026-0005.

Notes | Забелешки

- 1. These results relate **only to the tested sample(s)** as received in the QC Laboratory.
- 2. **No part of this report may be reproduced** except in full, without prior written permission of the QC Laboratory.
- 3. Measurement uncertainty is evaluated in accordance with the QC Laboratory's quality system; for qualitative tests the **reliability statement and inter-operator concordance data are available on request**.
- 4. Testing was performed **in-house** by Purely Plant QC personnel under an **ISO/IEC 17025-aligned** quality system within the **MK GMP** facility, using compendial Ph. Eur. procedures verified for the cannabis-flower matrix (QCV-001). **No analyses outsourced**. OOS handling per QCSOP-014.
