Bars: length = $\log_{10}$(result) ÷ $\log_{10}$(limit); the full cell width is the maximum acceptable count (QCSP 001 / Ph. Eur. 5.1.8 cat. C: TAMC 500 000, TYMC 50 000, BTGN 10^4). "< 10" is drawn at 10; a range "10^3–10^4" at its upper bound. ≤ 75 % of the limit (log) 75–100 % — near the limit above the limit / detected. Pink rows: LabCore (Versa) results. *P. aeruginosa* and *S. aureus* not tested.
