Сорти | Strains — дистрибуции, растојанија и класи

Δ до следен = растојание до следниот повисок резултат, во процентни поени и како релативен % од помалата вредност. Опсегот прикажан за секоја сорта е опсегот на ТЕСТИРАНИТЕ резултати — не е предложениот опсег на потенција по класа (тој е прикажан подолу, во Pot.- класите). | Δ to next = distance to the next higher result, in percentage points and as a relative % of the lower value. The range shown for each strain is the range of TESTED results — not the proposed potency grade range (that is shown below, in the Pot.- tiers).

Како се одредени класите | How the grades were set

Правилото важи за секоја сорта во овој документ и е наведено само овде — не се повторува подолу. | The rule below governs every strain in this document and is stated here only; it is not repeated further down.

1 НАЈСИЛНАТА КЛАСА ПРВА | STRONGEST TIER FIRST

Најсилната (највисоката) класа ја зема својата **полна $\pm 10,00\%$** . Над неа ништо не ја ограничува, па најсилната класа никогаш не се стеснува.

The highest tier takes its full $\pm 10.00\%$ — nothing constrains it from above, so the strongest grade is never squeezed.

2 НАДОЛУ ДО ДОПИР | EXTEND DOWNWARD TO TOUCH

Секоја пониска класа се протега надолу: горната граница е точно **0,01** под долната граница на класата над неа (без празен простор), и зема онолку од своите $\pm 10,00\%$ колку што стигнува до таа граница.

Each lower tier's ceiling sits exactly 0.01 below the floor of the tier above — no blind gap — taking as much of its own $\pm 10.00\%$ as reaches that ceiling.

3 ПОТЕЧНА САМО АКО МОРА | NARROWER ONLY IF FORCED

Пониска класа е потесна од своите полни $\pm 10\%$ **само** кога допирањето со класата над неа не остава повеќе простор — никогаш поради друга причина.

A lower tier is narrower than its full $\pm 10\%$ only when meeting the tier above leaves no more room — never for any other reason.

Толеранција | Tolerance $\leq$ **10,00%** од номиналата | of nominal

Номинала | Nominal на чекор | on a **0,50%** grid

Допир на класи | Tiers meet at **0,01**

Под | Floor **5,00%** Вкупен THC | Total THC

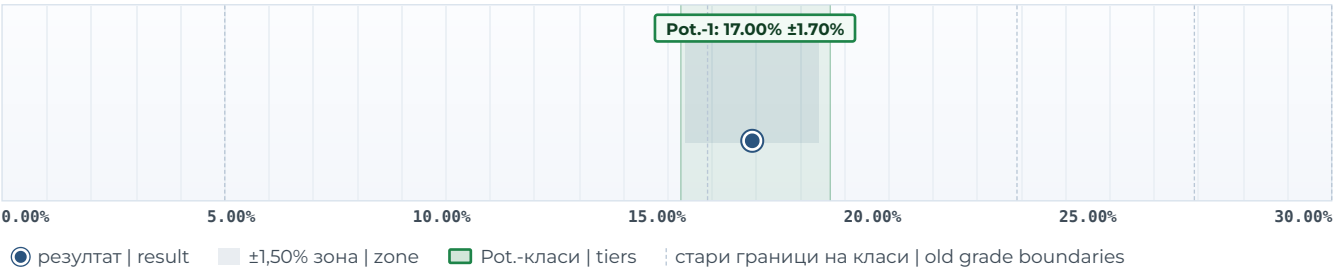

Сидро | Anchor = **најнов резултат | most recent result**

Пример | Worked example — Blue Sunset Sherbet (сидра | anchors 20,39 / 23,42 / 25,01): **Pot. -2 24.50% $\pm 2.45\%$** (22.05%–26.95%) ја зема полната ширина | takes the full cap $\rightarrow$ подот 22,05 | its floor 22.05 ја дава горната граница | sets the ceiling 22,04 за | for **Pot. -1 20.50% $\pm 1.54\%$** (18.96%–22.04%).

Накратко | In short: највисоката класа зема полни $\pm 10\%$, секоја следна се протега надолу до допир на 0,01, и ниту една не е потесна освен ако мора. Вистински јаз останува само таму каде што ниту еден пар номинали не може да премости два тестирани резултати во рамки на 10% — означен, никогаш измислена преодна класа. | **The highest tier takes its full $\pm 10\%$, each next one extends down to touch it at 0.01, and none is narrower unless forced.** A genuine gap remains only where no nominal pair can bridge two tested results within the 10% cap — flagged, never a fabricated bridge tier.

Жолти редови: без ниту еден сертификат — основа е декларираната вредност; тестирајте пред формално декларирање класа. | Yellow rows: no certificate on file — declared value used; test before declaring a grade.

Финални опсези на потенција по сорта | Final Potency Grade Ranges per Strain

Врз основа на 99 верификувани резултати — ова се финалните опсези по класи за секоја сорта: 20 сорти дефинитивно, 4 провизорно (само декларирана основа). Третата колона ги дава имињата по преименувањето од листот **01_Portfolio_Master** (78 серии, 54 преименувања, 36 нови имиња); каде што сериите под новото име се групираат поинаку, неговите сопствени класи се прикажани под името. Формалното усвојување останува во спецификациите QCSP по редовна процедура. | Based on 99 verified results — the final grade ranges per strain: 20 strains definitive, 4 provisional (declared basis only). The third column carries the names after renaming from the **01_Portfolio_Master** sheet (78 batches, 54 renames, 36 new names); where a new name's batches cluster differently, its own tiers are shown under that name. Formal adoption remains with the QCSP specifications through the regular procedure.
